

SECTORS

GRAPHITE

Graphite has a wide variety of applications and consequently requires a wide range of machining solutions.

POMDI designs and manufactures tools to:

1. Profile graphite punches and moulds used to manufacture sintered products (e.g. diamond segments).
2. Profile inserts and insert holders used in the glass industry.
3. Score carbon brushes and other power transmission components.

Designing effective tools for each of these highly specific applications requires in-depth industry expertise.
